

Print Module

The **WilComm Print Module** allows WilComm documents such as purchase orders, invoices and other high volume forms or reports to be printed automatically on any Windows-based print device. The use of electronic forms merging and on-demand printing reduces or eliminates the need for expensive pre-printed stationery, which in turn reduces paper wastage.

Electronic forms also help to present a consistent, professional image, as company design standards are easier to enforce, and templates can be updated as often as required by internal staff without incurring reprint costs.

Document Distribution with WilComm + Print Module

The Print Module is an optional component of the WilComm document output management suite. Once you have set up your document or form in WilComm, the distribution wizard allows you to assign a delivery method to each job. By intelligent inspection of files and their attributes, WilComm determines where and how to send each message.

Printing details are extracted directly from applications, databases or spool files. Print Output queues are automatically monitored for new documents to process.

Forms Merging

Electronic forms merging as a better alternative to legacy print systems. Printed forms from the Print Module include graphics, bar codes, logos and rotated text. Perform data stream calculations on the fly to generate dynamic output and provide your customers with the information they need. This enables you to create intelligent documents, personalised for your end users.

These controls are provided to ensure that all the creativity that goes into designing a form is retained and enhanced in high quality printed output. Pre-printed stationery is no longer required.

Printer Independent

Prints to all brands of Windows-based printer including laser, ink jet, bar code, thermal, dot matrix, till slip.

Multi-Platform Support

Provides print services for multiple platforms, including Windows, UNIX, OS400 and mainframe so you can leverage your investment for an enterprise-wide solution. Print works just like a system printer. No expensive programming or application changes are required.

Status Reporting

Full management of customer communication is available via the server. This allows you to perform reprints easily.

Requirements

Wilkinson products: WilComm Server
Operating Environment - Win 2000, XP & 2003, 512Mb min, 10Gb available hard disk space

Complementary Wilkinson Solutions

- Fax Module
- Email Module
- File Module
- Archive Module
